PHOTOMETRIC EVALUATION NOT FOR CONSTRUCTION

Based on the information provided, all dimensions and luminaire locations shown represent recommended positions. The engineer and/or architect must determine the applicability of the layout to existing or future field conditions.

This lighting plan represents illumination levels calculated from laboratory data taken under controlled conditions in accordance with The Illuminating Engineering Society (IES) approved nethrods. Actual performance of any namufacturer's luminaires nay vary due to changes in electrical voltage, tolerance in langs/LED's and other variable field conditions. Calculations do not include obstructions such as buildings, curbs, landscaping, or any other architectural elements unless noted. Fixture nomenclature noted does not include not include posture or poles. This damage is damage for protome tric. Include not the control include obstruction and protome tric. In the control include obstruction of the control in

The IES no longer uses the Cutoff Classification System for LED fixtures. The IES classifies LED fixtures with the BUG nating which refers to the Backlight-Uplight-Glare system. An Uplight of "UO" nost closely matches the old Full Cutoff nating.

Maintained Illumination Levels at 3' Above Grade.

Final Aiming Diagram, Racking Diagram, and Calculations Furnished upon Receipt of a released order.

Dimensions of drawings that have been scaled or converted from PDF files or scanned /submitted images are approximate.

Total Project Watts
Total Watts = 17232
