

Peak Series High Bay - Low Glare (PSHB LG)

Industrial & Commercial

OVERVIEW

Lumen Package (lm)	12,000 - 54,000
Wattage Range (W)	92 - 427
Efficacy Range (LPW)	126 - 149
Weight lbs (kg)	9.6 - 27.8 (4.3 - 12.6)
Control Options	OMSx, IMSBTxL, ALBC(S), ALSC(S)

QUICK LINKS

FEATURES & SPECIFICATIONS

Construction

- Rigid housing is die-formed steel.
- All metal parts are painted after fabrication following treatment with phosphate rust inhibitor. Finish coating of housing reflecting surfaces is with high-reflectance (minimum 92%) polyester powder.
- Quick wire access panel allows for easy power connections.
- Manufactured in the USA.

Optical System

- Optical system available with low glare lenses available in 3 finishes (White, Black, or Silver) and 2 textures (Gloss or Matte). Please refer to the lens proration table specific performance and UGR data.
- All LED boards are rotatable in 30 degree increments from 0 (direct downlight) to 180 (complete uplight) for maximum versatility in the illuminated space (see product dimensions section for details).
- Available in 4000K, 5000K CCT. Contact factory for other CCT options.
- Minimum CRI of 80.

Electrical

- Standard Universal Voltage (120-277 VAC) Input 50/60Hz or optional High Voltage (347-480 VAC).
- L70 Calculated Life: 100,000+ hours.
- High Efficiency Driver: minimum 85%.
- 0-10V dimming (1% - 100%) standard.

- Optional 120V-480V external emergency battery pack is available to meet critical life safety lighting requirements. The 90-minute batteries provide constant power to the LED system, ensuring code compliance. A test switch/indicator button is installed on the housing for ease of maintenance.
- Emergency battery backup available up to 30W output (see EM lumen output table for details).
- Operating temperature range -40C to 55C (-40F to 131F). Refer to ambient temperature table for specific units.
- Standard 6kV surge protection
 - 10kV surge protection optional.
 - All surge protection devices meet minimum Category C Low operation (per ANSI/IEEE C62.41.2).

Controls

- Controls Options Include:
 - Simple Sensor PIR end mount motion sensor available (OMSx).
 - Basic Bluetooth integral passive infrared sensor (IMSBTxL) with bluetooth app available.
 - Airlink Blue integral controller (ALBC) or integral controller with motion & photo sensor (ALBCSx).

Installation

- Mounting options include: hook cable mount (MCH), toggle cable mount (TCH - see application note below), pendant mount (PMK) or surface mount (SMK). See accessory table for appropriate mounting hardware ordering information.

- For EM applications, it is highly recommended to choose the TCH cable mount option to allow for side-to-side adjustment when countering the weight of the external battery (EM/EMHV).
- To maintain ambient rating, installation height can not be lower than 12'.

Warranty

- LSI luminaires carry a 5-year limited warranty. Refer to <https://www.lsicorp.com/resources/terms-conditions-warranty/> for more information.

Listings

- Listed to UL 1598 and UL 8750.
- Meets Buy American Act requirements.
- Title 24 Compliant; see local ordinance for qualification information.
- Suitable for damp locations.
- IK10 rated with polycarbonate lenses per IEC 66262 mechanical impact code.
- DesignLights Consortium® (DLC) qualified product. Not all versions of this product may be DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified.
- Specifications and dimensions subject to change without notice.

- External dim leads not available with controls.
- Switched circuitry uses an external switched device to control dimming and requires a second hot to operate the EM.
- Non-switched circuitry uses controls to operate dimming and can be ordered with battery, cord and plug. Battery is fed by the primary incoming hot.
- LED Chips are frequently updated therefore values are nominal.
- Electrical data at 25C (77F). Actual wattage may differ by +/-10%.
- Based on 180 LPW.
- Fixture ambient temperature limited to 30C (86F) when equipped with EM Options.
- EM wattage based on max input watts per manufacturer

1 Lumen maintenance values at 40C are calculated per TM-21 based on LM-80 data and in-situ testing.

2 In accordance with IESNA TM-21-11, Projected Values represent interpolated value based on time durations that are within six times the IESNA LM-80-08 total test duration for the device under testing.

3 In accordance with IESNA TM-21-11, Calculated Values represent time durations that exceed six times the IESNA LM-80-08 total test duration for the device under testing.

PHOTOMETRICS

Luminaire photometry has been conducted by a NVLAP accredited testing laboratory in accordance with IESNA LM-79-08. As specified by IESNA LM-79-08 the entire luminaire is tested as the source resulting in a luminaire efficiency of 100%.

See the individual product page on <https://www.lsicorp.com/> for detailed photometric data.

CONTROLS

Integral Bluetooth™ Motion and Photocell Sensor (IMSBTxL)

Slim low profile sensor provides multi-level control based on motion and/or daylight. Sensor controls 0-10 VDC LED drivers and is IP66 rated for cold and wet locations (-40°F to 167°F). Two unique PIR lenses are available and used based on fixture mounting height. All control parameters are adjustable via an iOS or Android App capable of storing and transmitting sensor profiles.

[Click here to learn more details about IMSBT](#)

LEVITON App

Apple

Android

AirLink Blue (ALBCSx)

Wireless Bluetooth Mesh Outdoor Lighting Control System that provides energy savings, code compliance and enhanced safety/security for parking lots and parking garages. Three key components; Bluetooth wireless radio/sensor controller, Time Keeper and an iOS App. Capable of grouping multiple fixtures and sensors as well as scheduling time-based events by zone. Radio/Sensor Controller is factory integrated into Area/ Site, Wall Mounted, Parking Garage and Canopy luminaires.

Sensor Sequence of Operations

Standard Programming	On Event	Off Event	On Light Level	Dim Light Level	Daylight Harvesting	Delay To Off	Sensitivity
OMSBTxL/IMSBTxL	Motion	No Motion	100%	N/A	On; Auto Calibration	20 minutes	High
OMSx	Motion	No Motion	N/A	N/A	N/A	30 seconds	Auto

Operation	Description
On Event	Trigger that activates lights to turn on; either automatic via motion detected or manually activated via push of button.
Off Event	Trigger that activates lights to turn off; either automatic via no motion detected or manually activated via push of button.
On Light Level	The light level that the fixtures will turn on to when ON EVENT occurs.
Dim Light Level	The light level that the fixtures will dim down to when no motion is detected.
Delay to Dim	The amount of time after which no motion is detected that the fixtures will be triggered to dim down. This sequence is optional, and sensor can be programmed to only trigger the fixture to turn off by entering 100% in this field.
Delay to Off	The amount of time after which no motion is detected that the fixtures will be triggered to turn off. If delay to dim is part of the programmed functionality, this is the amount of time after which no motion is detected after the fixture have already dimmed down.
Sensitivity	The sensitivity can be set to high, medium, low, or auto where applicable. High will detect smaller, simple motions. Low will only detect larger more complex motions. Auto temperature calibration adjusts the PIR sensitivity as ambient temperature rises to increase detection of heat movement through the field of view.
