

TROFFER RETROFIT KIT GEN 2 (TRK)

The Troffer Retrofit Kit Gen 2 is a significant upgrade over Gen 1 while retaining its best design element — simplicity of installation. Gen 2 takes it up several notches with field selectability in both lumen package and color temperature, and outputs up to 10,000 lumens for high mounting areas and easy integral or remote controls. The new troffer retrofit kit maximizes energy savings for the fastest payback, with fixture lifespans more than five times longer than fluorescent lamps at affordable price points.
